Council Rate!**

CLIMATE CHANGE ADAPTATION

Living with Water by Design - Henk Ovink

Hurricane Sandy was a devastating disaster that made the world turn its eye towards climate change. New York's response helped to frame a new way of doing things. Rebuild by Design aims to reconnect, starting with putting water back into the hearts and minds of people around the world. Water connects economy and ecology, and is crucial for our well-being, existence, and safety. Living with water is different than just thinking about protection. It is not just about the danger, with water as the perceived enemy. It is about embracing the complexity of our water system, at all scales, in our showers, tubs, and restaurants; in our businesses and industry; in our cities, landscapes, and regions.

Come hear Mr. Henk Ovink describe New York City and region's response to Hurricane Sandy and what it will look like as a future resilient city.

Presentations

Extreme Weather and the Need to Adapt

Dr. Blair Feltmate, U of Waterloo

Climate change and extreme weather events are the new reality. Is adapting to climate change prohibitively expensive? There are simple, cost-effective actions we can take in the short term to build climate resilient communities. Hear how governments, private companies, NGOs and citizens can work together to implement practical solutions to adapt to climate change.

Flood Forecast — Costs and Climate Resiliency

Kerry Freek, WaterTAP

What's the true cost of flooding to cities? Using the storm of July 8, 2013 in Toronto as a case study, this presentation explores the financial, environmental, and personal effects of extreme wet weather conditions.

Climate Resiliency for Local Government - the Fort Lauderdale Journey

Susanne M. Torriente, City of Fort Lauderdale, Florida

Understanding the challenges climate change may present to municipal managers and how Florida municipalities are preparing for climate change.

Legal Risk Management in a Changing Climate

Laura Zizzo, Zizzo Allan Law, Toronto

Addressing the legal drivers to adapt systems to account for climate change impacts, including potential liability implications of failing to account for climate related risk in design and operation of municipal systems.
